EDUCATION

University of Washington

Sep 2024 - Jun 2027

Bachelor of Science, Computer Science, Minor: Informatics

Seattle, WA

- **Coursework:** Software Tools, Hardware/Software Interface (C, Assembly), Machine Learning, Systems Programming, Data Structures & Algorithms, Software Design and Implementation

Highline College

Sep 2022 - Jun 2024

Associate of Science, Computer Science

Des Moines, WA

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, C, Swift, R, HTML, JavaScript, CSS, TypeScript

Development Tools: Git, Figma, Firebase, AWS, PyCharm, VS Code, Xcode, LaTeX, MySQL, Docker, Claude Code, React Native, Google Cloud

PROFESSIONAL EXPERIENCE

Google, Breakthrough Sprintern | *Software Engineering Intern*

Jul 2026 - Aug 2026

- Built the frontend for an AI career-exposure tool (Vite, React/TypeScript, D3): a two-level treemap over 200+ U.S. college majors, sized by graduate count and colored by AI-exposure score, with search and click-through to a grounded Gemini advisor.
- Cut load time by precomputing exposure scores into a static JSON bundle served with the app, so the treemap renders without a backend round-trip; also worked on the 4-person team that took the advisor's time-to-first-token from 8.2s to 1.0s.
- Deployed on Google Cloud Run with Cloud Build CI, read-only BigQuery for occupation queries, and API-key auth, rate limiting, and a per-query cost ceiling on the public endpoint.

UW Blockchain Society | *Software Developer (Dev Team)*

Dec 2025 - Present

- Shipped features on the society's production website in React, including the project listings page students and recruiters use to browse active blockchain projects.
- Worked in a shared codebase with a student engineering team, submitting PRs through code review and handling bug fixes alongside feature work.

AVELA | *Python & Mixed Reality Instructor*

Sep 2024 - Present

- Taught Python and mixed reality workshops to 40+ high school students across 5 STEM outreach sessions, ending in a final mixed-reality project each student built and demoed.

PROJECTS

Founder & Developer - LoopIn (University App) loopins.app

Jun 2025 - Present

Startup

- Built a cross-platform university app using React Native, Expo, and TypeScript, letting students create and join study sessions and discover campus events.
- Implemented the backend on Supabase, including authentication, data modeling, and CRUD workflows, plus early AI-assisted features for scheduling and message drafting.

openroles.ai openroles.ai openroles.ai.vercel.app

Jul 2026

Founder & Developer

- Built a job tracker for internship and new-grad listings using Next.js, TypeScript, and Supabase, deployed on Vercel, with a shared design system for consistent UI across pages.
- Patched a critical Next.js CVE surfaced during deployment and shipped the fix to production the same day.

AI 301: AI Open Source Capstone

Jun 2026 - Aug 2026

<https://github.com/necromancerrr/ai301-open-source-contribution>

CodePath

- Authored and submitted a new package (@stdlib/symbol/to-string-tag) to stdlib, an open-source standard library for JavaScript and TypeScript - 11 files across implementation, tests, TypeScript declarations, and docs.
- Resolved an ESLint Node-compatibility constraint by adopting existing codebase patterns rather than suppressing the rule, and registered the export in both the JavaScript and TypeScript namespace declarations.

LEADERSHIP & PROFESSIONAL DEVELOPMENT

CodePath | *AI 110: Foundations of AI Engineering* | *Completed 2026*

Jan 2026 - Apr 2026

- Built four end-to-end AI projects in Python spanning debugging, ML evaluation, recommendation systems, and applied AI system design
- Reviewed and tested all AI-generated code before shipping, using Claude Code and GitHub Copilot as accelerators rather than authorities

Google Development Club, University of Washington | *Event Coordinator*

Jan 2025 - Present

- Coordinated 4+ events including internship panels, speaker sessions, and tech info nights in partnership with BITS, IUGA, and ColorStack, reaching 100+ students across UW.
- Collaborated with marketing teams and student orgs to promote events, boosting attendance by 40% and increasing club engagement through themed programming and targeted outreach.
