

Yitbarek Ejigu

Seattle, WA | +1-206-665-9063 | yejigu@uw.edu | [linkedin.com/in/yitbarek/](https://www.linkedin.com/in/yitbarek/) | <https://github.com/necromancerrr> | <https://my-portfolio-eta-mocha-48.vercel.app/>

EDUCATION

University of Washington

Bachelor of Science, Computer Science, Minor: Informatics

- **Coursework:** Software Tools, Hardware/Software Interface (C, Assembly), Machine Learning, Systems Programming, Data Structures & Algorithms, Software Design and Implementation

Sep 2024 - Dec 2027

Seattle, WA

Highline College

Associate of Science, Computer Science

Sep 2022 - Jun 2024

Des Moines, WA

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, SQL, C, C++, Swift, R, HTML, JavaScript, CSS, TypeScript

- **Development Tools:** Git, Eclipse, Figma, Firebase, AWS, Pycharm, VS Code, XCode, LaTeX, MySQL, Docker, Claude Code, React Native, Google Cloud, Hermes

- **Skills:** Collaborative Problem-Solving, Team Collaboration, API Design, Leadership, Object-Oriented Design, UI/UX Design

PROFESSIONAL EXPERIENCE

Google, Breakthrough Sprintern | *Software Engineering Intern*

Jul 2026 - Aug 2026

- Built the frontend for an AI career-exposure tool (Vite, React/TypeScript, D3): a two-level treemap over 200+ U.S. college majors, sized by graduate count and colored by AI-exposure score, with search and click-through to a grounded Gemini advisor.
- Cut load time by precomputing exposure scores into a static JSON bundle served with the app, so the treemap renders without a backend round-trip; also worked on the 4-person team that took the advisor's time-to-first-token from 8.2s to 1.0s.
- Deployed on Google Cloud Run with Cloud Build CI, read-only BigQuery for occupation queries, and API-key auth, rate limiting, and a per-query cost ceiling on the public endpoint.

UW Blockchain Society | *Software Developer (Dev Team)*

Dec 2025 - Present

- Developed and shipped production features for the UW Blockchain Society website enabling students and recruiters to access real-time blockchain project listings and increasing portal traffic
- Contributed to ongoing feature development and maintenance of the shared production codebase using react, SQL, and Git within a cross-functional student engineering team, which reduced bug turnaround time by streamlining code-review workflows

AVELA | *Python & Mixed Reality Instructor*

Sep 2024 - Present

- Led Python programming and mixed reality workshops for 40+ high school students, delivering hands-on technical instruction through interactive coding and immersive learning activities, which boosted student engagement and enabled participants to complete a final mixed-reality project
- Designed and delivered 5+ STEM outreach workshops covering Python fundamentals and mixed reality concepts, preparing college-bound students for introductory computer science coursework

PROJECTS

Founder & Developer - LoopIn (University App) | *Startup*

Jun 2025 - Present

- Built a cross-platform university app MVP using React Native, Firebase, and TypeScript, enabling students to create and join study sessions and discover campus events
- Implemented core backend functionality with Firebase, including authentication, data modeling, and CRUD workflows, along with early AI-assisted features for scheduling and message drafting

Premier League Match Outcome Predictor | *Personal Project*

Jan 2025 - Feb 2025

- Engineered a machine learning model in Python with scikit-learn to predict Premier League match outcomes, achieving ~68% accuracy across 3+ seasons of historical match data.
- Processed and engineered features from 1,100+ matches, trained Logistic Regression and Random Forest classifiers, and achieved a 12% improvement over baseline win-rate models.

LEADERSHIP & PROFESSIONAL DEVELOPMENT

CodePath | *AI 110: Foundations of AI Engineering* | *Completed 2026*

Jan 2026 - Apr 2026

- Built four end-to-end AI projects in Python spanning debugging, ML evaluation, recommendation systems, and applied AI system design
- Implemented supervised, unsupervised, and generative models alongside RAG pipelines and agentic workflows
- Reviewed and tested all AI-generated code before shipping, using Claude Code and GitHub Copilot as accelerators rather than authorities

CodePath | *AI 301: AI Open Source Capstone* | *In Progress*

Jun 2026 - Present

- Authored and submitted a new package (@stdlib/symbol/to-string-tag) to stdlib, an open-source standard library for JavaScript and TypeScript - 11 files across implementation, tests, TypeScript declarations, and docs
- Resolved an ESLint Node-compatibility constraint by adopting existing codebase patterns rather than suppressing the rule; registered the export in both JavaScript and TypeScript namespace declarations

Google Development Club, University of Washington | *Event Coordinator*

Jan 2025 - Present

- Coordinated 4+ events including internship panels, speaker sessions, and tech info nights in partnership with BITS, IUGA, and ColorStack, reaching 100+ students across UW.
- Collaborated with marketing teams and student orgs to promote events, boosting attendance by 40% and increasing club engagement through themed programming and targeted outreach.

Umoja and Promise, Highline College | *Mentor/ Tutor*

Sep 2022 - Jun 2024

- Organized and led 6+ academic workshops with advising support, resulting in higher student attendance and broader leadership involvement across Umoja and Promise cohorts.
- Tutored 50+ Promise and Umoja students in math (Algebra–Calculus) and English over 6+ months, improving grades and boosting retention in STEM-related courses.
